

# RESIDENTIAL PROJECTS

## ECO - PROJECT R 1

- ◆ Production Build
- ◆ Custom Homes
- ◆ Foundations
- ◆ Pools
- ◆ Safe Rooms
- ◆ Retaining Walls
- ◆ Municipal Housing
- ◆ Affordable Housing
- ◆ Habitat for Humanity

**VILLAGES AT RIO DEL SOL** - Palm Desert, CA - 160 home subdivision with 4 design types in 2 different villages. A crew of 4 workers can easily complete the ECO-Block walls of one house per week.

**ECO-BLOCK** won the bid over other ICFs due to the support offered by the company, including technical assistance and on-site construction training.

**PAOLASINI POOL & HOUSE** - Ontario, Canada - In addition to the ECO-Block house, this custom construction also has a 4 ½ ft deep pool with radius and matching retaining walls made from ECO-Block and finished with a stucco coating.

**ECO-BLOCK** provided a cost effective solution to the design criteria of curves and thick walls.

**MADERA HOUSE** - Gainesville, Florida - 88 home subdivision, built in cooperation with the University of Florida as an energy efficient model community. "There's a market for green building, and builders can make a profit" Juddy Carter, GC.

**ECO-BLOCK** solved the sound control program required by tight lots. The concrete wall also helped qualify for lower insurance rates for fire and hurricane protection.

**MILLENIUM HOUSE** - Oklahoma - Spearheaded by Neighbor to Neighbor, a community organization, this house has it all: energy savings, resistance to tornados and fires, affordability, improved indoor air quality, and simple construction.

**ECO-BLOCK** was chosen for its ability to meet all the requirements, easily.

**LUBBOCK CITY HOUSING** - Texas - This ongoing housing reconstruction program, funded in part by HUD and DOE, builds houses as \$61 / sf. Homeowners enjoy a \$33 reduction on their combined monthly expenses of mortgage and utility bills. These houses are not only affordable to build, but also affordable to live in!

**ECO-BLOCK** ICFs met the criteria for approved code testing and product quality.
